

## Cyclacel Pharmaceuticals Reports Fourth Quarter and Full Year 2019 Financial Results

February 26, 2020

**– Anticancer Activity of Fadraciclub (CYC065) Monotherapy in Patients with MCL1 Amplified Solid Tumor and Fadraciclub-venetoclax Combination in Patients with Relapsed or Refractory AML/MDS and CLL –**

**– Conference Call Scheduled February 26, 2020 at 4:30 p.m. EDT –**

BERKELEY HEIGHTS, N.J., Feb. 26, 2020 (GLOBE NEWSWIRE) -- Cyclacel Pharmaceuticals, Inc. (NASDAQ: CYCC, NASDAQ: CYCCP; "Cyclacel" or the "Company"), a biopharmaceutical company developing innovative medicines based on cancer cell biology, today reported its financial results and business highlights for the fourth quarter and full year ended December 31, 2019. The Company's net loss applicable to common shareholders for the three months and year ended December 31, 2019 was \$2.4 million and \$8.0 million, respectively. As of December 31, 2019, cash and cash equivalents totaled \$11.9 million. Based on current spending, cash on hand provides the Company with sufficient resources to fund all planned operations including research and development through Q1 2021.

"Our fadraciclub (CYC065) CDK inhibitor is establishing a leadership position among MCL1 suppressing compounds in clinical development," said Spiro Rombotis, President and Chief Executive Officer. "After enrolling approximately 60 patients to date with multiple dosing schedules in three Phase 1 dose escalation studies in patients with relapsed or refractory (R/R) solid tumors and hematological malignancies, we have demonstrated safety, proof of mechanism by durable suppression of MCL1 and anticancer activity of fadraciclub as single agent and in combinations. Encouragingly, a heavily pretreated patient with MCL1 amplified endometrial cancer has received over 10 cycles of fadraciclub monotherapy achieved a confirmed partial response (PR) and a further reduction in her target tumor lesions of 73%. Based on data thus far, we are developing a precision medicine strategy to further evaluate fadraciclub as monotherapy and in combinations. In our Phase 1 trial of a combination of fadraciclub and venetoclax in patients with relapsed or refractory AML/MDS, we have enrolled 11 patients and reached dose level five and in CLL 3 patients and dose level two. Our clinical stage pipeline, comprising of fadraciclub, sapacitabine and CYC140, our PLK1 inhibitor, is a central element of our strategy of building an innovative pipeline addressing cancer resistance and DNA damage response."

### Key Corporate Highlights

- **CYC065-01 Phase 1 part 2 single agent i.v.** – In November 2019, we reported anticancer activity in a heavily pretreated a patient with MCL1 amplified endometrial cancer who achieved a radiographically confirmed partial response (PR) after 4 cycles at 213mg. The patient remains on study after 10 cycles and shrinkage of her target tumor lesions has reached 73%. An additional patient with cyclin E amplified ovarian cancer achieved stable disease after 4 cycles at 213mg with 29% tumor shrinkage. We are expanding the 213mg dose level to recruit additional patients and determine the recommended Phase 2 dose.
- **CYC065-01 Phase 1 part 3 single agent p.o.** – We are evaluating an oral capsule form of fadraciclub in patients with advanced solid tumors and have enrolled two patients at 75mg and 150mg once daily. Pharmacokinetic (PK) data in the two patients demonstrated a predictable PK profile closely overlapping the i.v. form with encouraging exposure levels.
- **CYC065-03 Phase 1 fadraciclub i.v. and venetoclax p.o.** – We have dosed 11 heavily pretreated patients with R/R AML in five dose levels up to 200 mg/m<sup>2</sup> in combination with the BCL2 inhibitor venetoclax. Evidence of anticancer activity has been observed in multiple patients with blast reductions in peripheral blood. Preclinical AML data demonstrated synergy of fadraciclub and venetoclax, suggesting that targeting both BCL2 and MCL1 may be more beneficial than inhibiting either protein alone.
- **CYC065-02 Phase 1 fadraciclub i.v. and venetoclax p.o.** – We have dosed 3 patients with R/R CLL in two dose levels up to 85 mg/m<sup>2</sup> in combination with venetoclax. Evidence of anticancer activity has been observed in two patients who experienced reduction in lymph node size with one of them achieving MRD negative status. Preclinical CLL data demonstrated synergy of fadraciclub and venetoclax, suggesting that targeting both BCL2 and MCL1 may be more beneficial than inhibiting either protein alone.

- **CYC682-11 Phase 1b/2 part 2 sapacitabine p.o. and venetoclax p.o.**– We have enrolled 10 patients in two dose cohorts in our DNA Damage Response (DDR) program evaluating an oral combination of sapacitabine and venetoclax in patients with R/R AML/MDS. Sapacitabine is a nucleoside analogue that is active in AML and MDS R/R to prior therapy such as cytarabine or hypomethylating agents. Preclinical data demonstrated synergy of sapacitabine with BCL2 inhibition which may offer an effective, oral treatment regimen for patients who have failed front-line therapy.
- **CYC140-01 Phase 1 CYC140 i.v.** - We have enrolled 4 patients in our first-in-human, dose escalation study evaluating CYC140 in patients with advanced leukemias. CYC140 is a small molecule, selective polo-like-kinase 1 (PLK1) inhibitor that has demonstrated potent and selective target inhibition and high activity in xenograft models of human cancers.

More information on our clinical trials can be found at [www.clinicaltrials.gov](http://www.clinicaltrials.gov).

### Key Business Objectives for 2020

- Report updated Phase 1 safety, PK and efficacy data for fadraciclib utilizing a frequent i.v. dosing schedule in patients with advanced solid cancers;
- Report initial safety and PK data from the Phase 1 study of an oral formulation of fadraciclib;
- Report initial safety and proof of concept data from the fadraciclib-venetoclax Phase 1 studies in R/R AML/MDS and CLL;
- Report initial data from the sapacitabine-venetoclax Phase 1b/2 study in patients with R/R AML/MDS;
- Report initial data from the CYC140 Phase 1 first-in-human study in R/R leukemias; and
- Report data from the Phase 1b/2 IST of sapacitabine-olaparib combination in patients with BRCA mutant metastatic breast cancer when reported by the investigators.

### Financial Highlights

As of December 31, 2019, cash and cash equivalents totaled \$11.9 million, compared to \$17.5 million as of December 31, 2018. The decrease of \$5.6 million was primarily due to net cash used in operating activities of \$9.4 million, offset by \$3.8 million of net cash provided by financing activities.

Revenues for the three months and year ended December 31, 2019 amounted to \$0 compared to \$0.2 million for the same periods in 2018. The 2018 revenue related to a collaboration, licensing and supply agreement with ManRos Therapeutics, entered into in June 2015.

Research and development expenses were \$1.4 million and \$4.7 million for the three months and year ended December 31, 2019 as compared to \$1.1 million and \$4.3 million for the same periods in 2018. Research and development expenses relating to the transcriptional regulation, CDK inhibitor program with fadraciclib increased by \$0.5 million from \$2.5 million for the year ended December 31, 2018 to \$3.0 million for the year ended December 31, 2019, as the clinical evaluation of fadraciclib progressed. Research and development expenses relating to the DDR, sapacitabine program decreased by \$0.4 million from \$0.9 million for the year ended December 31, 2018 to \$0.5 million for the year ended December 31, 2019, primarily as a result of expenditure related to clinical trial drug supply manufacturing in 2018.

General and administrative expenses for the three months and year ended December 31, 2019 were \$1.4 million and \$5.0 million respectively, compared to \$1.5 million and \$5.4 million for the same periods of the previous year.

Total other income, net for the three months and year ended December 31, 2019 were \$0.1 million and \$0.6 million, compared to \$0.1 million and \$0.9 million for the same periods of the previous year. The decrease of \$0.3 million for the year ended December 31, 2019 is primarily related to a reduction in income received under an Asset Purchase Agreement with ThermoFisher Scientific.

United Kingdom research & development tax credits were \$0.4 million and \$1.3 million for the three months and year ended December 31, 2019 as compared to \$0.4 million and \$1.3 million for the same periods in 2018.

Net loss for the three months and year ended December 31, 2019 were \$2.3 million and \$7.8 million compared to \$2.0 million and \$7.3 million for the same periods in 2018.

The Company raised net proceeds of approximately \$4.1 million during 2019, from its Common Stock Sales Agreement with H.C. Wainwright, which is now completed.

The Company estimates that cash resources of \$11.9 million as of December 31, 2019 will fund currently planned programs through the first quarter of 2021.

### About Cyclacel Pharmaceuticals, Inc.

Cyclacel Pharmaceuticals is a clinical-stage biopharmaceutical company developing innovative cancer medicines based on cell cycle, transcriptional regulation and DNA damage response biology. The transcriptional regulation program is evaluating fadraciclib as a single agent in solid tumors and in combination with venetoclax in patients with relapsed or refractory AML/MDS and CLL. The DNA damage response program is evaluating an oral combination of sapacitabine and venetoclax in patients with relapsed or refractory AML/MDS. An IST is evaluating an oral combination of sapacitabine and olaparib in patients with BRCA mutant breast cancer. The anti-mitotic program is evaluating CYC140, a PLK1 inhibitor, in advanced leukemias/MDS patients. Cyclacel's strategy is to build a diversified biopharmaceutical business focused in hematology and oncology based on a pipeline of novel drug candidates. For additional information, please visit [www.cyclacel.com](http://www.cyclacel.com).

### Forward-looking Statements

This news release contains certain forward-looking statements that involve risks and uncertainties that could cause actual results to be materially different from historical results or from any future results expressed or implied by such forward-looking statements. Such forward-looking statements include statements regarding, among other things, the efficacy, safety and intended utilization of Cyclacel's product candidates, the conduct and results of future clinical trials, plans regarding regulatory filings, future research and clinical trials and plans regarding partnering activities. Factors that may cause actual results to differ materially include the risk that product candidates that appeared promising in early research and clinical trials do not demonstrate safety and/or efficacy in larger-scale or later clinical trials, trials may have difficulty enrolling, Cyclacel may not obtain approval to market its product candidates, the risks associated with reliance on outside financing to meet capital requirements, and the risks associated with reliance on collaborative partners for further clinical trials, development and commercialization of product candidates. You are urged to consider statements that include the words "may," "will," "would," "could," "should," "believes," "estimates," "projects," "potential," "expects," "plans," "anticipates," "intends," "continues," "forecast," "designed," "goal," or the negative of those words or other comparable words to be uncertain and forward-looking. For a further list and description of the risks and uncertainties the Company faces, please refer to our most recent Annual Report on Form 10-K and other periodic and other filings we file with the Securities and Exchange Commission and are available at [www.sec.gov](http://www.sec.gov). Such forward-looking statements are current only as of the date they are made, and we assume no obligation to update any forward-looking statements, whether as a result of new information, future events or otherwise.
